

Beer Keg Clamp 2T415B

Specification:

The KAUP Beer Keg Klamp T415B is a special attachment. It was specially developed for the transport of several beer kegs. A load backrest is an integral part of the Beer Keg Clamp and enables several layers of kegs to be transported on top of each other.

Attachment has separate sideshift as standard. The maximum allowable sideshift stroke (e.g. ± 100 mm) is always available independent of fork or arm position (with clamps or fork positioners).

Attachment is operated hydraulically, i.e. supplied with oil from the forklift truck's hydraulic system. Truck requires two additional hydraulic functions.

Beer Keg Clamp 2T415B
