

Rotator 360° endless, foundry version T391G

Specification:

The KAUP Rotator 360° endless T391 is also available in a foundry implementation. This attachment is adapted to the demands of this operational area with a closed fork carriage plate and a closed base plate as well as heat-resistant covered hydraulic tubes. Otherwise this rotator resembles the T391.

Attachment rotates hydraulically by 360° endless in both directions.

Attachment has separate sideshift as standard. The maximum allowable sideshift stroke (e.g. \pm 100 mm) is always available independent of fork or arm position (with clamps or fork positioners).

Attachment supplied serially without forks. All forks in accordance with ISO 2330 can be used. Matching forks model T180 are available.

Attachment is serially manufactured in foundry version. It is designed for operation in applications with extremely high temperatures. Further Information are displayed in a glossary in the info-center.

Attachment is operated hydraulically, i.e. supplied with oil from the forklift truck's hydraulic system. Truck requires two additional hydraulic functions.
