Higher capacities available upon request.

Foldable forks T180KH

Specification:

The Foldable Forks T180KH of KAUP are used where shortage of space (for example lift use) or internal transport makes it sometimes necessary to fold on the forks. For it the forks are hung up directly in the fork carriage and are opened hydraulically.

Moreover, the foldable forks can also be combined with other attachments of KAUP, for example bale clamps.

Qualities:

- Robust construction
- An easy assembly
- Very good visibility conditions
