Monday - Friday: 17:00 – 7:00 Uhr
Saturday und Sunday: 8:00 – 18:00 Uhr

Kaup GmbH & Co KG • Braunstr. 17 • D-63741 Aschaffenburg • email: kaup@kaup.de • www.kaup.de
1. Introduction

1.1 Working with this manual

This operating manual contains important information on how to operate the attachment properly, safely and efficiently.

The operating manual shall be read, understood and applied by all personnel working on or with the equipment, for example:

- Installation and operating the equipment
- Inspection, maintenance and repair
- Transport and disposal

The manual must be kept available for ready reference at the equipment's place of use.

The illustrations in this operating manual may deviate from the actual version of the equipment.

1.2 Warning notes and symbols

The following symbols are used in this operating manual to highlight details of special importance:

⚠️ Identifies details relating to do's and don’ts for the purpose of avoiding injury and property damage.

👉 Specific details relating to the efficient use of the attachment and other advice.

- Lists are denoted by a shadowed box.

- Steps to be performed by the operator are denoted by a black dot.

(1) In illustrations, particular elements have numbered pointers. Numbers in brackets in the text refer to the corresponding elements.

1.3 Copyright

This documentation including all parts is copyrighted. Any use or change outside the narrow limits of copyright law without permission from KAUP GmbH & Co KG is forbidden and liable to prosecution. This applies, in particular, to reproduction, translation, microfilming as well as storage and processing in electronic systems.
1.4 CE-Mark

KAUP-Attachments carry the CE-mark. The EC Declaration of Conformity ensures that the attachment conforms to the EC machinery guideline.

1.5 Qualified and authorised personnel

Qualified and authorised personnel are equipped by way of their education and training to perform the tasks assigned to them in accordance with accepted practice and safety regulations. They are assigned tasks by the equipment owner.

1.6 Warranty claims based on defects

KAUP shall not be liable for any damage to the equipment resulting from:

- Improper use / operation.
- Modifications to components.
- Inappropriate installation, maintenance, inspection and servicing.
- Assignment of unqualified or non-authorised personnel.
- Claims raised by third parties.

1.7 Limits of applicable use

KAUP-attachments are intended for use under the following climatic conditions:

- Average ambient temperature for continuous operation: +25°C
- Allowable maximum ambient temperature, short term (up to 1h): +40°C
- Allowable minimum ambient temperature for attachments intended for indoor use: +5°C
- Allowable minimum ambient temperature for attachments intended for outdoor use: -20°C

Standard models of KAUP-attachments are NOT suitable for:

- Use in cold storage facilities.
- Use in explosive environments.
- Use in conjunction with hydraulic systems involving biological oils.
- Use in rough environmental conditions (e.g. seawater)
- The transport of acidic liquids.
2. Safety aspects

As the user, extend the safety instructions with generally applicable, legal and other measures that ensure a safe and environmentally friendly operation of the attachment.

Pay close attention to all safety- and danger-related signs on the attachment and in this operating manual. Failure to observe these can result in severe injury or even death.

Pay close attention to the operating manual provided by the manufacturer of the fork lift truck.

Keep a safe distance away from moving, reciprocating or rotating parts of the attachment to avoid danger of crushing, pinching or entanglement.

Notify the responsible department/person immediately of changes and faults in operation of the attachment that affect safety.

The attachment shall be shut down.

Use aids to vision (e.g. mirrors, camera, etc.) where goods being transported obstruct vision.

Only allow work on the attachment to be carried out by qualified and authorised persons. Adhere to the legal minimum age in the country of operation!

The attachment should only be used for the purpose intended.

Never work on or with attachments while under the influence of drugs, alcohol or medicines which affect reaction time.
3. Design

3.1 Pallet handler with mounting

A triple clamp consists of a clamping body (1) onto which the inner slide (2) and middle slide (3) are mounted with a shaft guide (4) and sliders (5). Cylinders (6) move the outer sliding carriages (8) which are fitted with sliding pieces (7). The forks (9) are screwed onto the sliding carriages. Sideshift components (10, 11, 12) and hooks (13) are attached to the clamp body (1).

3.2 Proper use of the equipment

Triple Pallet Handlers are designed to transport several pallets simultaneously.

Proper use of the machine and/or equipment includes the following:

- Observance of the operating manual at all times.
- Observance of the technical data on the identification plate on the attachment.
- Adherence to the specified inspection and maintenance instructions.
3.3 Improper use

- Exceeding the allowable load capacity and load centre.
- Dragging or pushing loads with the attachment.
- One sided pick up of pallets.
- Pick up of pallet with only one fork.
- Transporting persons with the load or load handling devices.
- Mounting auxiliary equipment on the attachment such that the original mode of usage is changed, (e.g. fork extensions) must be authorised by the manufacturer.

4. Installation and checking out

4.1 Installation

- Installation and commissioning should be performed by qualified and authorised personnel only.
- Pay attention to a sufficient load-carrying capacity of the lifting means.
- The following are examples of preferred lifting means:

<table>
<thead>
<tr>
<th>Capacity</th>
<th>Part-no.</th>
</tr>
</thead>
<tbody>
<tr>
<td>250 kg/M16</td>
<td>9710160008</td>
</tr>
<tr>
<td>1200 kg/M16</td>
<td>0360010201</td>
</tr>
<tr>
<td>2000 kg/M16</td>
<td>0360010301</td>
</tr>
</tbody>
</table>
• Hoist the attachment at the positions indicated (1).

• Demount the lower hooks (2).

• Mount the attachment on the fork carriage of the lift truck (3).

• Check that the attachment is correctly seated in the centre lock (4).

• Mount the lower hooks (2), tightening the screws (5) with a torque of 190 Nm.

• Connect the hose lines (6) to the hydraulic connectors on the lift truck.

Trucks equipped with attachments which hold the load by power (e.g. paper clamp) shall feature control(s) with a secondary action to prevent unintentional release of the load. Also take note in this respect of the operating instruction of the lift truck.

• Before initial operation, check the functions and the identification of the attachment with the movement directions of the operating elements (operating lever, joystick, etc.).

Mount the residual carrying capacity notice and identification of the operating elements (if not already present) of the combination of lift truck/attached equipment on the lift truck.
4.2 Checking out

KAUP-attachments are delivered pre-lubricated. If the attachment has been in storage for a longer period, we recommend that it be lubricated again before being placed in service. See 6. Maintenance and onwards.

Failure of the safety devices (e.g. the pressure relief valve and the non-return valve) and incorrect connection of the controls to the actuators can cause malfunctioning of the attachment and damage to it.

After mounting and before initial operation, check the functions and the identification of the attached equipment with the movement directions of the operating elements (operating lever, joystick, etc.).

4.2.1 Bleeding the hydraulic system

- Start the lift truck.
- Move the sideshifting unit repeatedly in both directions to maximum extent.
- Repeatedly cycle the clamp / fork positioner from the fully open to the fully closed position.
- Inspect the hydraulic connections for leakage.

4.2.2 Adjustment after entry into service

The hydraulic system is under pressure. During work on hydraulic components oil spurting out can cause injuries. Unload the system in accordance with the operating instructions of the lift truck manufacturer. In the case of injuries caused by high pressure oil, inform the works physician and seek out a specialist immediately.

- Synchronising the carriages of slides with flow divider

The Pallet Handler is equipped with a flow divider. The flow divider can have a tolerance of up to 5% of the cylinder stroke.

A visible unevenness of movement can be achieved by fully opening or closing the cylinder in the end position.

- Synchronising the carriages of slides without flow divider

The synchronization of slides is adjusted ex-factory. This can alter for different friction conditions (wear), temperatures and volumes conveyed. Perform a readjustment. The recommended working temperature of the hydraulic fluid is approx. 35 °C.
The synchronization is adjustable by means of two throttles on the bottom of the cylinders.

5. Operation

5.1 General

At least once per working shift, the machine and equipment must be inspected for visible damage and defects. Repeat faults to your superior and have them rectified without delay.

Be aware of persons present in the area where you are working or driving and ensure that they are not endangered.

Do not transport any load exceeding that specified on the residual load plate for the particular combination of lift truck and attachment.

Note the load-bearing capacity of the attachment as stated on the rating plate. This figure always represents the load carried by two or more fork arms.

The nominal capacity of the forks must exceed the load.

5.2 Load handling

Set the forks as wide apart as possible for the load to be carried.

Position the mast vertically and take up the load parallel to the floor.

Always transport pallets, boxes and containers using both forks.

Drive the attachment up to the load to maximum extent.

Raise the load about 300 mm and tilt the mast backwards.

Centre the load to the middle of the lift truck during take-up and transport.
5.3 Driving

- Ensure that pallets, boxes, containers and packaging are in good condition.
- Do not drive with the mast tilted forward.
- Take care when driving that neither the attachment nor the load comes into contact with the ground.
- Ensure that multiple items stacked on top of one another are securely fastened.

6. Maintenance and servicing

6.1 General

Regular maintenance is essential to ensure reliable operation and long service life of the KAUP attachment.

- Ensure that maintenance and servicing are performed by qualified and authorised personnel only.
- Lubrication and cleaning work on the attachment may also be performed by the lift truck operator.
- Perform maintenance and servicing work only when the attachment is parked securely on a stable, level foundation. For installing and removing, it is recommended to use a pallet to take the attachment. The attachment can thus be securely placed and transported.
- Pay attention to a sufficient load-carrying capacity of the lifting means.
- Replace missing or defective warning signs on the attachment.
- Do not use third party spare parts. Through poor quality or incorrect matching they can result in a risk of accident. The EC Declaration of Conformity by the manufacturer becomes invalid and you assume full responsibility in the case of accident. Use only original spare parts from the manufacturer.
- The hydraulic system is under pressure. During work on hydraulic components oil spurtting out can cause injuries. Unload the system in accordance with the operating instructions of the lift truck manufacturer. In the case of injuries caused by high pressure oil, inform the works physician and seek out a specialist immediately.
- Screw connections can loosen due to vibration of the attachment. During routine maintenance check that screw connections are correctly torqued and replace screws which are visibly damaged.
Note the following tightening torques which are valid for screws with connecting surfaces according to ISO 4762, ISO 4014, ISO 4032 etc.:

<table>
<thead>
<tr>
<th>Screw/bolt rating</th>
<th>8.8</th>
<th>10.9</th>
<th>12.9</th>
</tr>
</thead>
<tbody>
<tr>
<td>M6 thread</td>
<td>9.3Nm</td>
<td>14Nm</td>
<td>16Nm</td>
</tr>
<tr>
<td>M8 thread</td>
<td>23Nm</td>
<td>33Nm</td>
<td>39Nm</td>
</tr>
<tr>
<td>M10 thread</td>
<td>45Nm</td>
<td>66Nm</td>
<td>77Nm</td>
</tr>
<tr>
<td>M12 thread</td>
<td>77Nm</td>
<td>115Nm</td>
<td>135Nm</td>
</tr>
<tr>
<td>M16 thread</td>
<td>190Nm</td>
<td>280Nm</td>
<td>330Nm</td>
</tr>
<tr>
<td>M20 thread</td>
<td>385Nm</td>
<td>550Nm</td>
<td>640Nm</td>
</tr>
</tbody>
</table>

Failure of the safety devices (e.g. the pressure relief valve and the non-return valve) and incorrect connection of the controls to the actuators can cause malfunctioning of the attachment and damage to it.

After mounting and before initial operation, check the functions and the identification of the attached equipment with the movement directions of the operating elements (operating lever, joystick, etc.).

6.2 Significant modification

Significant modifications are, for example, those which affect the stability, performance, speed and strength of components.

The EC Declaration of Conformity is invalidated by a significant modification of the attachment.

Modifications to the attachment may only be made with prior approval by the manufacturer.

6.3 Schedule for routine maintenance and lubricants

<table>
<thead>
<tr>
<th>Greases</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lithium soap grease NLGI Class 2</td>
<td>e.g. Avialith 2</td>
</tr>
<tr>
<td></td>
<td>Designation DIN51825: K 2 K-30</td>
</tr>
<tr>
<td>Complex soap grease NLGI Class 2</td>
<td>e.g. Turmogrease Gel M 5</td>
</tr>
<tr>
<td></td>
<td>Foundry quality</td>
</tr>
<tr>
<td>Teflon spray</td>
<td>e.g. Wieds or Rivolta</td>
</tr>
<tr>
<td></td>
<td>Only for plastic sections</td>
</tr>
</tbody>
</table>

The specified maintenance schedules can change as a result of the operating conditions such as extreme cold, heat and dust or poor ground conditions and this must be taken into account by the owner.

With other loads, such as fork arms with a length of over 2,400 mm or raised load centres, amended/shorter maintenance intervals should be agreed by the user with the manufacturer.
6.3.1 Pallet handler
6.3.2 Mounting (with or without sideshift)

Daily

Check all lines, hoses and connections for leakage and damage.

After 50h / every 500h thereafter

Check:

- Screws (1) on support (2).
- Screws (3) on support (4).
- Screws (5) on the shaft lock (6).
- Screws (7) on the forks (8).
- Screws (9) on the lower hooks (10).

Replace loose or damaged screws. Torque the screws as specified in Chapter 6.1 General.

Weekly

Grease:

- Sliding pieces (11) of the slides (12) by way of the greasing nipples (13).
- Sliding pieces (14) of the slides (15, 16) by way of the greasing nipples (17, 18).
Caution! Grease only by hand press.
- Sliding pieces (19) by way of the greasing nipples (20).
- Supporting rollers on the lower hooks (21) as necessary.

Every 200h

Check wear on:
- Sliding pieces (11).
- Sliding pieces (14) of the slides (15, 16).
- Sliding pieces (19).
- Supporting rollers (22).

Annually

- Inspect the heel (23) of the fork (8) for wear and cracks.
- Remove forks from service when wear exceeds 10 % of the thickness of the fork.

As necessary

The compression springs (35) are pre-tensioned. During service operations, this may result in injuries caused by stored energy. The compression springs (35) may be assembled or disassembled only with the spring force released. For this, remove the bolts (3), remove the brackets (4), and extend the cylinders (27) up to their maximum stroke.

Renew worn sliding pieces (19) by removing the hooks (10). Demount the nut (33) of the cylinder (34). Lift the triple pallet handler using the hanging points marked. Replace the sliding pieces (10). During installation pay close attention that the sliding pieces (10) are seated correctly. Remount the pallet handler in the reverse order.

Renew the worn slides (11) by removing the bolts (1), limit stops (2) and the nuts (25) of the cylinder (27). Pull the slider (12) to the side to remove. Remove the greasing nipple (13) and the screw (29). Replace the sliding pieces (11). When installing the new sliding pieces, make sure that the axial stops (30) are correctly seated. Push the slider into clamp body (31). Mount the nuts (25), the cylinder (27), the limit stops (2) and bolts (1).

Replace defective support rollers (22) in the brackets (24) by removing the bolts (9). Using suitable hoisting gear tilt the pallet handler forwards away from the fork carriage on the lift truck. Remove the brackets (24) and pins (21), and support rollers (22). Remount the pallet handler in the reverse order.

Sliders (14) are low wear and have a long service life. If a replacement is necessary, contact our customer service.
After installing or removing a cylinder (27, 28, 34), always check the clearance between the cylinder mount and nut (25, 26, 33) of the cylinder (27, 28, 34). Cylinders are installed with axial clearance of 1.5 to 2 mm.

Bent forks are not safe to operate and their continued use should be prevented.

Straightening of forks may only be performed by the manufacturer of the fork or by one of his authorised workshops.

You can increase the service life of forks by using forks especially protected against wear.

### 8. Disposal

Prevent environmental damage by disposing of the following items properly in accordance with relevant national regulations:

- Hydraulic fluids, greases, lubricants and soiled working materials (Cleaning rags, etc.)
- Packaging material (Pallets, straps, cartons and plastic sheeting)

After decommissioning, the attachment should be disposed of in accordance with local legislation and regulations.
9. Transport

During transport of the attachment, care should be given to using appropriate means of support (e.g. pallets). These must not be damaged. The attachment must be secured against slipping or tipping over on the support.

10. Decommissioning and storage

If the attachment is to be stored for an extended period, the hydraulic connectors must be sealed against contamination and damage. Store the attachment in a clean, dry environment.

11. Spare parts list (not part of the Operating Manual)

12. EC Declaration of Conformity (Summary)

KAUP GMBH & Co. KG • Braunstraße 17 • D-63741 Aschaffenburg

we hereby declare that the machinery

<table>
<thead>
<tr>
