Monday - Friday: 5 pm to 7 am
Saturday and Sunday: 8 am to 6 pm

Kaup GmbH & Co KG • Braunstr. 17 • D-63741 Aschaffenburg • email: kaup@kaup.de • www.kaup.de
1. Introduction

1.1 Working with this manual

This operating manual contains important information on how to operate the attachment properly, safely and efficiently.

The operating manual shall be read, understood and applied by all personnel working on or with the equipment, for example:

- Installation and operating the equipment
- Inspection, maintenance and repair
- Transport and disposal

The manual must be kept available for ready reference at the equipment’s place of use.

The illustrations in this operating manual may deviate from the actual version of the equipment.

1.2 Warning notes and symbols

The following symbols are used in this operating manual to highlight details of special importance:

⚠️ Identifies details relating to do’s and don’ts for the purpose of avoiding injury and property damage.

特定 Specific details relating to the efficient use of the attachment and other advice.

- Lists are denoted by a shadowed box.

• Steps to be performed by the operator are denoted by a black dot.

(1) In illustrations, particular elements have numbered pointers. Numbers in brackets in the text refer to the corresponding elements.

1.3 Copyright

This documentation including all parts is copyrighted. Any use or change outside the narrow limits of copyright law without permission from KAUP GmbH & Co KG is forbidden and liable to prosecution. This applies, in particular, to reproduction, translation, microfilming as well as storage and processing in electronic systems.
1.4 **CE-Mark**

KAUP-Attachments carry the CE-mark. The EC Declaration of Conformity ensures that the attachment conforms to the EC machinery guideline.

1.5 **Qualified and authorised personnel**

Qualified and authorised personnel are equipped by way of their education and training to perform the tasks assigned to them in accordance with accepted practice and safety regulations. They are assigned tasks by the equipment owner.

1.6 **Warranty claims based on defects**

KAUP shall not be liable for any damage to the equipment resulting from:

- Improper use / operation.
- Modifications to components.
- Inappropriate installation, maintenance, inspection and servicing.
- Assignment of unqualified or non-authorised personnel.
- Claims raised by third parties.

1.7 **Limits of applicable use**

KAUP-attachments are intended for use under the following climatic conditions:

- Average ambient temperature for continuous operation: +25°C
- Allowable maximum ambient temperature, short term (up to 1h): +40°C
- Allowable minimum ambient temperature for attachments intended for indoor use: +5°C
- Allowable minimum ambient temperature for attachments intended for outdoor use: -20°C

Standard models of KAUP-attachments are NOT suitable for:

- Use in cold storage facilities.
- Use in explosive environments.
- Use in conjunction with hydraulic systems involving biological oils.
- Use in rough environmental conditions (e.g. seawater)
- The transport of acidic liquids.
2. Safety aspects

As the user, extend the safety instructions with generally applicable, legal and other measures that ensure a safe and environmentally friendly operation of the attachment.

Pay close attention to all safety- and danger-related signs on the attachment and in this operating manual. Failure to observe these can result in severe injury or even death.

Pay close attention to the operating manual provided by the manufacturer of the fork lift truck.

Keep a safe distance away from moving, reciprocating or rotating parts of the attachment to avoid danger of crushing, pinching or entanglement.

Notify the responsible department/person immediately of changes and faults in operation of the attachment that affect safety. The attachment shall be shut down.

Use aids to vision (e.g. mirrors, camera, etc.) where goods being transported obstruct vision.

Only allow work on the attachment to be carried out by qualified and authorised persons. Adhere to the legal minimum age in the country of operation!

The attachment should only be used for the purpose intended.

Never work on or with attachments while under the influence of drugs, alcohol or medicines which affect reaction time.
3. Design

3.1 Clamp / Fork Positioner with mounting

A clamp / fork positioner consists of a clamp body (1) on which conduits (2) are mounted. Cylinders (4) move the conduits (2), which are equipped with sliders (3). Sidesthift components (5, 6) – optionally (9, 10) - or hooks (7, 8) are attached to the clamp body (1).
3.2 Forks / Round forks

Model T 401 / T 401 Z / T 401 H / T 411 / T 411 Z / T 411 H consists of conduits (1) and welded-on forks (2).
Model **T 401 AZ / T 401 AH / T 411 AZ / T 411 AH** consists of conduits (1), a welded-on plate (3) and screw-on fork arms (4).

Model **T 401 ZR / T 411 ZR** consists of conduits (1) and welded-on round forks (5).

### 3.3 Efficient equipment settings on electric vehicles

Please use our reference values for setting the lift trucks and attachments. These are found at [www.kaup.de](http://www.kaup.de) in the Services -> Product Support section.

### 3.4 Proper use of the equipment

Clamps are intended for the transport of loads on pallets and non-palletized goods, e.g. bales, crates and cartons.

Fork positioners or fork positioners with round forks are designed for carrying loads on pallets or in skeleton containers. Fork positioners with round forks are designed for carrying one roll per round fork.

Proper use of the machine and/or equipment includes the following:

- [ ] Observance of the operating manual at all times.
- [ ] Observance of the technical data on the identification plate on the attachment.
- [ ] Adherence to the specified inspection and maintenance instructions.

### 3.5 Improper use

- [ ] Exceeding the allowable load capacity and load centre.
- [ ] Dragging or pushing loads with the attachment
- [ ] Transporting persons with the load or load handling devices
- [ ] Mounting auxiliary equipment on the attachment such that the original mode of usage is changed, (e.g. fork extensions) must be authorised by the manufacturer.
- [ ] **Fork positioner with round forks**:
  - Lifting up a roll between the round forks.
4. Installation and checking out

4.1 Installation

Installation and commissioning should be performed by qualified and authorised personnel only.

Pay attention to a sufficient load-carrying capacity of the lifting means.

The following are examples of preferred lifting means:

<table>
<thead>
<tr>
<th>Capacity</th>
<th>Part-no.</th>
</tr>
</thead>
<tbody>
<tr>
<td>250 kg/M16</td>
<td>9710160008</td>
</tr>
<tr>
<td>1200 kg/M16</td>
<td>0360010201</td>
</tr>
<tr>
<td>2000 kg/M16</td>
<td>0360010301</td>
</tr>
</tbody>
</table>
• Using appropriate lifting means, lift the attachment at the positions indicated (1).

• Demount the lower hooks (2).

• Mount the attachment on the fork carriage of the lift truck (3).

• Check that the attachment is correctly seated in the centre lock (4).
• Mount the lower hooks (2), tightening the screws (5) with a torque of 190 Nm.

• Use pipes or hoses to connect the hydraulic ports (6) to the hydraulic ports of the lift truck.

Lift trucks equipped with attachments that hold loads using force (e.g. paper clamps) must have a second device to operate that prevents the unintended release of the load. Also take note in this respect of the operating instruction of the lift truck.

• Before initial operation, check the functions and the identification of the attachment with the movement directions of the operating elements (operating lever, joystick, etc.).

• Mount the residual carrying capacity notice and identification of the operating elements (if not already present) of the combination of lift truck/attached equipment on the lift truck.

4.2 Checking out

KAUP-attachments are delivered pre-lubricated. If the attachment has been in storage for a longer period, we recommend that it be lubricated again before being placed in service. See 6. Maintenance and onwards.

Failure of the safety devices (e.g. the pressure relief valve and the non-return valve) and incorrect connection of the controls to the actuators can cause malfunctioning of the attachment and damage to it.

After mounting and before initial operation, check the functions and the identification of the attached equipment with the movement directions of the operating elements (operating lever, joystick, etc.).

4.2.1 Bleeding the hydraulic system

• Start the lift truck.

• Move the sideshifter repeatedly in both directions to maximum extent.

• Repeatedly cycle the clamp / fork positioner from the fully open to the fully closed position.

• Inspect the hydraulic connections for leakage.

4.2.2 Adjustment after putting into service

The hydraulic system is under pressure. During work on hydraulic components oil spurt out can cause injuries. Unload the system in accordance with the operating instructions of the lift truck manufacturer. In the case of injuries caused by high pressure oil, inform the works physician and seek out a specialist immediately.
Synchronising the arms

The synchronization of arms is adjusted ex-factory. This can alter for different friction conditions (wear), temperatures and volumes conveyed. Perform a readjustment. The recommended working temperature of the hydraulic fluid is approx. 35 °C.

The synchronization is adjustable by means of two throttles on the bottom of the cylinders.

Adjustment of the clamp pressure  Setting the clamping pressure with a pressure limiting valve

Attachments are adjusted ex-factory to a pressure of 160 bar.

A change in pressure is necessary only, if the load

- slips or
- is damaged.

Make the settings in the numerical sequence and in the direction of the arrows.

The pressure indication on the manometer gauge drops after clamping. This is not a malfunction of the attachment, being caused by the installation of a transmission.
5. Operation

5.1 General

At least once per working shift, the machine and equipment must be inspected for visible damage and defects. Repeat faults to your superior and have them rectified without delay.

Be aware of persons present in the area where you are working or driving and ensure that they are not endangered.

Do not transport any load exceeding that specified on the residual load plate for the particular combination of lift truck and attachment.

Note the load-bearing capacity of the attachment as stated on the rating plate. This figure always represents the load carried by two or more fork arms / round forks.

The nominal capacity of the forks / round forks must exceed the load.

5.2 Load handling

Set the forks / round forks as wide apart as possible for the load to be carried.

Position the mast vertically and take up the load parallel to the floor.

Always transport pallets, boxes and containers using both forks.

Drive the attachment up to the load to maximum extent.

Raise the load about 300 mm and tilt the mast backwards.

Centre the load to the middle of the lift truck during take-up and transport.

5.3 Driving

Ensure that pallets, boxes, containers and packaging are in good condition.

Ensure that the load is in good condition.

Do not drive with the mast tilted forward.

Take care when driving that neither the attachment nor the load comes into contact with the ground.

Ensure that multiple items stacked on top of one another are securely fastened.
6. **Maintenance and servicing**

6.1 **General**

Regular maintenance is essential to ensure reliable operation and long service life of the KAUP attachment.

- Ensure that maintenance and servicing are performed by qualified and authorised personnel only.
- Lubrication and cleaning work on the attachment may also be performed by the lift truck operator.
- Perform maintenance and servicing work only when the attachment is parked securely on a stable, level foundation. For installing and removing, it is recommended to use a pallet to take the attachment. The attachment can thus be securely placed and transported.
- Pay attention to a sufficient load-carrying capacity of the lifting means.
- Replace missing or defective warning signs on the attachment.

**Do not use third party spare parts. Through poor quality or incorrect matching they can result in a risk of accident. The EC Declaration of Conformity by the manufacturer becomes invalid and you assume full responsibility in the case of accident.**

**Use only original spare parts from the manufacturer.**

- The hydraulic system is under pressure. During work on hydraulic components oil spurting out can cause injuries. Unload the system in accordance with the operating instructions of the lift truck manufacturer. In the case of injuries caused by high pressure oil, inform the works physician and seek out a specialist immediately.
- Screw connections can loosen due to vibration of the attachment. During routine maintenance check that screw connections are correctly torqued and replace screws which are visibly damaged.

Note the following tightening torques which are valid for screws with connecting surfaces according to ISO 4762, ISO 4014, ISO 4032 etc.:

<table>
<thead>
<tr>
<th>Screw/bolt rating</th>
<th>8.8</th>
<th>10.9</th>
<th>12.9</th>
</tr>
</thead>
<tbody>
<tr>

<td>190Nm</td>
<td>280Nm</td>
<td>330Nm</td>
</tr>
<tr>
<td>M20 thread</td>
<td>385Nm</td>
<td>550Nm</td>
<td>640Nm</td>
</tr>
</tbody>
</table>
During any disassembly operations, be sure that parts to be disassembled can easily be removed. For removing parts, use the clearance between bolts and the parts to be removed.

Our service videos available at www.kaup.de in the Online Services section may be used for assistance as necessary.

Failure of the safety devices (e.g. the pressure relief valve and the non-return valve) and incorrect connection of the controls to the actuators can cause malfunctioning of the attachment and damage to it. After mounting and before initial operation, check the functions and the identification of the attached equipment with the movement directions of the operating elements (operating lever, joystick, etc.).

6.2 Significant modification

Significant modifications are, for example, those which affect the stability, performance, speed and strength of components.

The EC Declaration of Conformity is invalidated by a significant modification of the attachment.

Modifications to the attachment may only be made with prior approval by the manufacturer.

6.3 Schedule for routine maintenance and lubricants

<table>
<thead>
<tr>
<th>Greases</th>
<th>Note</th>
<th>Designation DIN51825:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lithium soap grease NLGI Class 2</td>
<td>e.g. Avialith 2</td>
<td>K 2 K-30</td>
</tr>
<tr>
<td>Complex soap grease NLGI Class 2</td>
<td>e.g. Turmogrease Gel M 5</td>
<td>Foundry quality</td>
</tr>
<tr>
<td>Teflon spray</td>
<td>e.g. Wieds or Rivolta</td>
<td>Only for plastic sections</td>
</tr>
</tbody>
</table>

The specified maintenance schedules can change as a result of the operating conditions such as extreme cold, heat and dust or poor ground conditions and this must be taken into account by the owner.

With other loads, such as fork arms with a length of over 2,400 mm or raised load centres, amended/shorter maintenance intervals should be agreed by the user with the manufacturer.
6.3.1 Clamp
6.3.2 Mounting (with or without sideshift)

**Daily**

Check all lines, hoses and connections for leakage and damage.
After 50h / every 500h thereafter

Check:

- Screws (11) on the sideshifter housing (12).
- Screws (21) and washer (22) on the guide (23).
- Screws (17) on the upper hooks (18).
- Screws (13) on the lower hooks (14).
- Screws (19) on the spacer (20).

Replace loose or damaged screws. Torque the screws as specified in Chapter 6.1 General.

Weekly

Grease:

- Sliding pieces (2) by way of the greasing nipples (1).
- Sliding pieces (10) by way of the greasing nipples (9).
- Sliding pieces (26) by way of the greasing nipples (27).
- Supporting rollers on the lower hooks (16) as necessary.

Every 200h

Check wear on:

- Sliding pieces (2).
- Sliding pieces (10).
- Sliding pieces (26).
- Supporting rollers (15).

As necessary

Renew worn sliders (10) by removing the hooks (14). Lift the attachment off the fork carriage of the lift truck. Replace the sliders (10). During installation pay close attention that the sliders (10) are seated correctly. Place the attachment on the fork carriage and mount the hooks (14) using screws (13).

Renew worn sliders (26) by removing the hydraulic lines from the cylinder (28) with the hydraulic system depressurised. Remove the nut (31). Lift the attachment using the lifting points marked. Replace the sliders (26). Ensure correct seating of the sliders (26) during installation. Reinstall the attachment and cylinder (28) with nut (31) and the hydraulic lines.

Replace worn sliders (2) by removing nut (5) from each cylinder (6). Pull the arms to the side to remove (see chapter 3.2). Remove the greasing nipple (1) and the screws (3, 3a). Replace the sliders (2). When installing the new sliders, make sure that the axial stops (4) are correctly seated. Remount the screws (3, 3a) and the greasing nipple (1). Push the arms into clamp body and reinstall nuts (5) of cylinders (6).
Replace defective supporting rollers (15) in the hooks (14) by removing the screws (13). Using suitable hoisting gear tilt the clamp body (7) forwards away from the fork carriage on the lift truck. Remove the bolts in the hooks, remove the defective supporting rollers (15) and replace them with new ones. Remount the clamp body (7) in the reverse order.

Replace the faulty cylinder (28) by removing the hydraulic lines from the cylinder (28) with the hydraulic system depressurised. Remove the nut (29), loosen the lock nut (30), and remove the nut (31). Replace the faulty cylinder (28) and install the lock nut (30), nut (31), and nut (29). Tighten the lock nut (31) and re-install the hydraulic lines.

After installing or removing a cylinder (6), always check the clearance between the cylinder mount and nut of the cylinder (8). Cylinders are installed with axial clearance of 1.5 to 2 mm.

6.3.3 Forks / Round forks

![Diagram showing parts 1, 2, and 3 with labels for Models T401/T401Z/T401H / T411/T411Z/T411H and Models T401AZ/T401AH / T411AZ/T411AH]
Daily

Check all lines, hoses and connections for leakage and damage.

Carry out a visual check of the welded seam (4) slide (5) / carrying element (6).

After 50h / every 500h thereafter

Check:

Screws (2) on the forks (3).

Replace loose or damaged screws. Torque the screws as specified in Chapter 6.1 General.
Annually

- Inspect the heel of the fork (1) for wear and cracks.
- Remove forks from service when wear exceeds 10% of the thickness of the fork.
- Check the welded seam (4) slide (5) / carrying element (2) using a dye penetration method.

As necessary

- Bent forks are not safe to operate and their continued use should be prevented.
- Straightening of forks may only be performed by the manufacturer of the fork or by one of his authorised workshops.
- You can increase the service life of forks by using forks especially protected against wear.

6.3.4 Identification plate and caution board
Number | Description | KAUP order number
-------|-------------|------------------
1      | Identification plate | only by quality department
2      | Before putting into operation carefully read and take note of the operating and security instructions. | 0100016401
3      | Never reach into the unit as long as parts could still be moving due to the danger of squashing or shearing. | 0100016601
4      | Use suspension point! | 0100015001
5      | kaxxxxxx | KAUP – order number without, engraved in the material

7. Troubleshooting

Troubleshooting should only be performed by qualified and authorised personnel.

**Legend:** FFZ = lift truck, DBV = Pressure relief valve, WE-Drossel = elbow-type screwed throttle
8. **Disposal**

   Prevent environmental damage by disposing of the following items properly in accordance with relevant national regulations:
   - Hydraulic fluids, greases, lubricants and soiled working materials (Cleaning rags, etc.)
   - Packaging material (Pallets, straps, cartons and plastic sheeting)

   After decommissioning, the attachment should be disposed of in accordance with local legislation and regulations.

9. **Transport**

   During transport of the attachment, care should be given to using appropriate means of support (e.g. pallets). These must not be damaged. The attachment must be secured against slipping or tipping over on the support.

10. **Decommissioning and storage**

    If the attachment is to be stored for an extended period, all hydraulic connectors must be sealed against contamination and damage. Store the attachment in a clean, dry environment.

11. **Spare parts list** (not part of the Operating Manual)

12. **EC Declaration of Conformity (Summary)**

    KAUP GMBH & Co. KG • Braunstraße 17 • D-63741 Aschaffenburg

    we hereby declare that the machinery

    ```
    | Model:            | Clamp / Fork positioner |
    | Type:             | T 411xx, T 401xx       |
    ```

    conforms to the latest valid version of the Machinery Directive 2006/42/EG.

    The person authorised to compile the technical documents:

    see EC-Declaration of Conformity

    KAUP GmbH & Co. KG
